Mohit: SQL Queries, Embedded SQL Queries, Query optimization, Triggers

Deeksha Singh Duvesh: Views and Grants, Project documentation, Project Scope and Relational Schema, Indexing

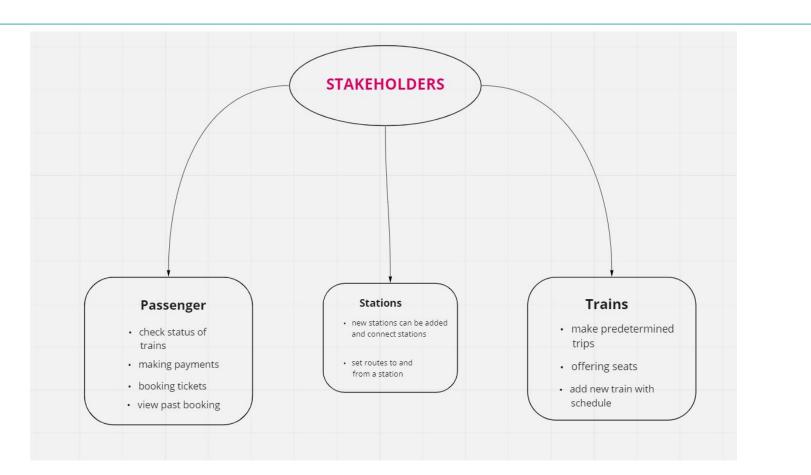

Problem Statement

We often face issues with getting proper information from the authorities during train travel like we don't know the proper exact train timings, or how much long is the waiting list. The authorities also face issues managing all these many passengers on paper. So, we thought of making a portal/system that would cater to all these needs and make a passengers journey pleasurable. We have added admin side portal too for storing and showing details for their perusal too.

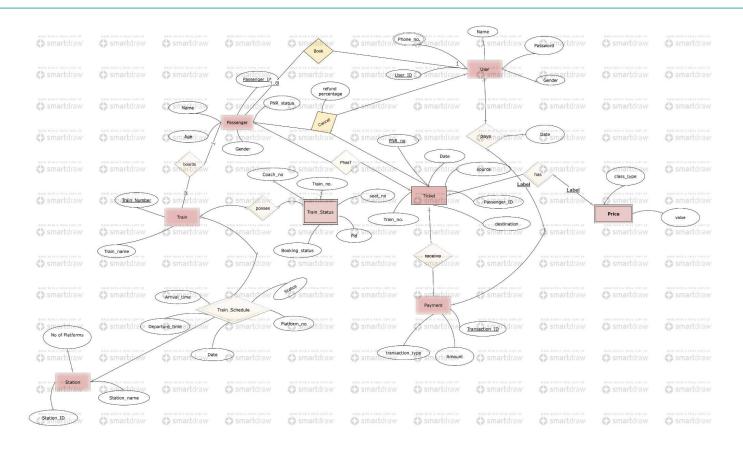

Scope:

This system is reserved only for booking tickets, informations about the management of trains(kilometers and etc), drivers(how much is their salaries). In this system, the user can: see available trips from one location to another see all trips the user made in a month buy tickets the train system control, can track all information about the passengers as well as the payments.

Stakeholders:

Entity Relationship(ER) Diagram:

Relation Schema:

Relation Schema (Bold represents relations)

```
Train (train_no., #train_name, #station_no., #p_id)
Station (station_no., station_id, no._of_platforms)
Train_status (coach_no., seat_no., p_id, booking_status)
Ticket (#p_id, #PRN_no, Date, destination, source,train_no, #transacton_id)
Payment (transaction_id, amount, transaction_type)
Price (class_type, value, p_id)
Passenger (p_id, name, age, gender)
User (u_id, name, password, gender, #p_id, #transaction_id)
Train_schedule (arrival_time, Date, status, platform_no, dep_time)
Pays (Date)
```

Views and Grants:

View for passenger's booking details

```
DEFINER = `root`@`localhost`
    SOL SECURITY DEFINER
VIEW `railwaybooking`.`passenger booking details 1` AS
    SELECT
        `p`.`Name` AS `name`,
        `p`.`Age` AS `age`,
        `p`.`Gender` AS `gender`,
        `t`.`Train_Number` AS `Train_number`,
        `t`.`Source` AS `source`,
        `t`.`Destination` AS `destination`,
        `t`.`Date` AS `date`,
        `ts`.`Coach No` AS `coach no`,
        `ts`.`Seat_No` AS `seat_no`
    FROM
        ((`railwaybooking`.`passenger` `p`
        JOIN `railwaybooking`.`ticket` `t` ON (((`p`.`Passenger ID` = UTL())
            AND (`p`.`Passenger_ID` = `t`.`Passenger_ID`))))
        JOIN `railwaybooking`.`train_status` `ts` ON (((`p`.`Passenger_ID` = UTL())
            AND (`ts`.`Pid` = `p`.`Passenger_ID`))));;
```

View for showing train schedule

```
DEFINER = `root`@`localhost`
    SQL SECURITY DEFINER
VIEW `railwaybooking`.`train schedule_view` AS
    SELECT
        `railwaybooking`.`train schedule`.`Station ID` AS `station id`,
        `railwaybooking`.`train schedule`.`Platform No` AS `Platform No`,
        `railwaybooking`.`train schedule`.`Arrival Time` AS `Arrival Time`,
        `railwaybooking`.`train schedule`.`Departure Time` AS `Departure Time`,
        `railwaybooking`.`train schedule`.`Status` AS `status`
    FROM
        `railwaybooking`.`train schedule`
    WHERE
        (`railwaybooking`.`train schedule`.`Train number` = UTL())
    ORDER BY `railwaybooking`.`train schedule`.`Arrival Time`;;
```

TRIGGERS:

Trigger for checking age range.

```
CREATE DEFINER=`root`@`localhost` TRIGGER `passenger BEFORE INSERT`
BEFORE INSERT ON `passenger` FOR EACH ROW BEGIN
    DECLARE msg varchar(128) default '';
    IF NEW.age < 3 OR NEW.age > 120
    THEN SET msg = "Age should be between 3 and 120";
    END IF;
    IF msg != ''
    THEN SIGNAL SQLSTATE '45000'
    SET MESSAGE TEXT = msg;
    END IF:
```

Trigger for checking minimum price constraint for change ticket price.

```
CREATE DEFINER=`root`@`localhost` TRIGGER `price_BEFORE_UPDATE` BEFORE UPDATE ON `price` FOR EACH ROW BEGIN
DECLARE msg varchar(128) default '';
